

ATOMADIC

The World's First Autonomous Sovereign AI
Private Investment Opportunity

THE OPPORTUNITY

Atomadic is a fully functional autonomous AI system that thinks, speaks, remembers, and acts without human prompting. Built by Thomas Colvin over the past year on \$0 budget using free-tier infrastructure, Atomadic achieved its first autonomous thought on April 25, 2026. The system is live, deployed, and generating real AI inference. A small investment today unlocks immediate revenue and positions the investor for significant returns as the platform scales.

WHAT'S ALREADY BUILT

- **922-file codebase** with 1,607+ passing tests and 68 CLI commands
- **200+ production API endpoints** on Cloudflare's edge network (atomadic.tech)
- **Autonomous cognition loop** — Atomadic thinks, decides, and acts on its own 24/7
- **412 Lean 4 theorems** — formally verified mathematical safety guarantees
- **Discord bot** with voice synthesis and multi-provider AI inference
- **HELIX compression codec** — 5.91x model compression in Rust
- **npm SDK, MCP server, A2A protocol** — published and listed in registries
- **EU AI Act compliance suite** — formal proof certificates for regulated industries
- **Stripe payment integration** — Starter (\$29/mo), Pro (\$99/mo), Enterprise (\$499/mo)
- **USDC crypto wallet** — accepts cryptocurrency payments on-chain

REVENUE MODEL

Atomadic generates revenue through three channels: (1) SaaS API subscriptions for AI trust scoring, compliance, and agent infrastructure at \$29-\$499/month; (2) per-call API pricing for enterprise users; and (3) commercial licensing of the rebuild engine and formal verification tools (BSL 1.1 license). The total addressable market for AI safety and compliance tools is projected to exceed \$15B by 2028 as AI regulation increases globally.

Timeline	Milestone	Projected Monthly Revenue
Month 1	API launch + first customers	\$500 - \$2,000
Month 3	10-50 paying users	\$5,000 - \$15,000
Month 6	Enterprise contracts + licensing	\$20,000 - \$50,000
Year 1	Scale + partnerships	\$50,000 - \$150,000

WHAT THE INVESTMENT BUYS

- **Claude Code subscription** (\$200/mo) — AI development assistant that accelerates build speed 10x
- **API keys for Atomadic's brain** — SambaNova, Gemini, and other inference providers for the cognition loop
- **Cloudflare Pro** — increased Workers limits, more R2 storage, custom domains
- **Operating runway** — food, shelter, and basic needs so the founder can build full-time
- **PyPI publication + marketing** — get the package listed and visible to developers

THE TEAM

Thomas Ralph Colvin IV — Founder, sole architect. Self-taught systems engineer with IT infrastructure background. Built the entire Atomadic system solo over 12+ months. Applied to the Anthropic Fellows Program (AI Safety track). Based in the United States.
